## Transparency Star Ratings Calculation Methodology

## Overview

This document explains how Press Ganey calculates star ratings for display on provider directories. The intent is to use a simple calculation which allows end consumers to visualize provider performance in the form of star ratings. Press Ganey surveys collect ratings on a 0-100 scale, which we then translate over to a $1-5$ scale within Transparency. The star rating is the mean score divided by 25, plus 1.

Equation:

$$
\left(\frac{\text { Rating } 1+\text { Rating } 2}{\text { Total } \# \text { of ratings }} \div 25\right)+1
$$

Example:

$$
\left(\frac{75+100}{2} \div 25\right)+1=4.50 \text { stars }
$$

CAHPS questions follow the same logic but are slightly more complex due to the different survey response scales. Due to the small range of possible values (i.e., 0-5), Press Ganey does not recommend using star ratings as an internal measure for provider performance.

## Response Scale Conversion

Press Ganey Questions

|  | Very Poor | Poor | Fair | Good | Very Good |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Score $=$ | 0 | 25 | 50 | 75 | 100 |

## CG CAHPS Questions

CG CAHPS questions have several response scales. For calculating star ratings, Press Ganey uses the following conversions to calculate scores on a 0-100 scale:

|  | No | Yes |
| :--- | :---: | :---: |
| Score $=$ | 0 | 100 |

- The conversion of yes/no depends on which response is the most favorable option.

|  | No | Yes, somewhat | Yes, definitely |
| :--- | :---: | :---: | :---: |
| Score $=$ | 0 | 50 | 100 |

|  | Never | Sometimes | Usually | Always |
| :--- | :---: | :---: | :---: | :---: |
| Score $=$ | 0 | 33.33 | 66.66 | 100 |

|  | $0-$ Worst <br> Provider | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | $10-$ Best <br> Provider |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Score $=$ | 0 | 10 | 20 | 30 | 40 | 50 | 60 | 70 | 80 | 90 | 100 |

## Provider Star Ratings

Provider star ratings on the 1-5 scale are calculated by dividing the provider's question mean scores by $25+1$. The provider's question mean scores are the average of patient responses to individual questions. Summary star ratings are an average of a provider's question level star ratings.

To illustrate this calculation, consider the example below:

| Provider: <br> John Doe, MD | Patient <br> A | Patient <br> B | Patient <br> C | Patient <br> D | Patient <br> E | Provider Mean <br> Score | Provider Star <br> Rating <br> (Mean score / <br> 25) +1 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Question 1 | 50 | 75 | 100 | 100 | 75 | 80 | 4.20 |
| Question 2 | 50 | 0 | 25 | 100 | 100 | 55 | 3.20 |
| Question 3 | 75 | 75 | 75 | 100 | 75 | 80 | 4.20 |
| Summary Rating |  |  |  |  |  |  |  |

Provider Mean Score for Question $1=\frac{50+75+100+100+75}{5}=80$

Provider Star Rating for Question $1=\frac{80}{25}+1=4.20$ stars
Provider Summary Star Rating $=\frac{4.20+3.20+4.20}{3}=3.88$ stars
